ACT 3D Equipment and Services Installs DMS 3D Printer for Local Manufacturer

ACT is the region's leading provider of 3D content-to-print solutions, including personal, professional and production 3-D printers, print materials and custom parts services for Connecticut and all of New England. The company's goal is to help New England manufacturers embrace

and implement additive manufacturing technology into their businesses, helping to reduce overall costs while bringing new products to market. An excellent example of this is their recent installation of a 3D Systems ProX 300 Direct Metal Sintering (DMS) printer at Mohawk Manufacturing in Middletown, Connecticut.

Mohawk Manufacturing Company was established in 1921 as a family owned business. Over the years, Mohawk has taken advantage of new

technologies to remain at the forefront of their field – metal stampings. Recently, the company decided to expand its services

to include additive manufacturing and created a new division called Additive Manufacturing of New England (AMNE). While the company un-

derstands 3D printing is not a completely new technology, what separates AMNE from many of the other companies offering 3D printing services is that they print your parts in metal, in quantities from one to production run quantity.

AMNE and their newly installed ProX 300 DMS printer operate as a job shop, focusing on filling the need

for parts made by 3D. They are not only making parts for companies here in New England, but across the country. According to company sales manager Tyler Tordanato, "If you have a new part design, a new design to make an old part more efficient, a part you have no idea about how to have it machined, or if you simply want to learn more about additive manufacturing, give us a call." As the company slogan says, "If you can imagine it, we can make it."

For more information, a demonstration or a quote please call Additive Manufacturing of New England at 860-316-5946 or visit the company website at www.additivenewengland.com.

For more information on how a 3D printer can benefit your company please call the ACT Group of Companies at 800-548-9929

or visit them online at www.goactgroup.com.
